
QUICKSYNC

STAY ORGANIZED, STAY AHEAD.

INTRODUCTION

Problem Statement:

As students, managing academic tasks, particularly homework, is often overwhelming. Many students struggle to estimate how much time tasks will take, leading to procrastination or poor time management. Additionally, existing tools fail to provide tailored insights to students, especially in our region, leaving a gap for an efficient, user-friendly solution.

Why it's critical:

Studies show that effective time management directly impacts academic performance and reduces stress. Recognizing this, we developed QuickSync—a solution tailored for students to address these challenges innovatively and effectively.

ABOUT OUR PROJECT

QuickSync introduces a platform
where students can:

01

Estimate Homework Completion Time:
Leveraging ML algorithms to predict time
based on task complexity and student
behavior.

02

Organize and Manage Tasks:
A clean, intuitive interface that
prioritizes ease of use.

03

COMPARATIVE STUDY, TOOLS, AND TECHNOLOGIES

Comparative Study:

We analyzed several platforms, both local and international:

Google Classroom:

Offers basic task management but lacks predictive analytics or personalization.

Trello:

Great for generic task management but not tailored for students or homework.

Local Tools:

These often lack advanced features like ML-based time estimation.

Our Edge:

QuickSync is hyper-focused on student needs, combining time prediction, an intuitive interface, and local context-specific solutions.

TOOLS AND TECHNOLOGIES:

01

- **Frontend:** Flutter for cross-platform compatibility and a seamless user experience.

02

- **Styling:** Tailwind CSS for responsive and modern design.

03

- **Database:** MongoDB for scalable and efficient data handling.

04

- **Development Framework:** Agile methodology to ensure iterative improvement and quick adaptation.

UI/UX

TASK MANAGEMENT

We divided tasks into the following categories:

- **Research and Analysis:** Conducted comparative studies and user need assessments.
- **Frontend Development:** Focused on Flutter to create the user interface.
- **Backend Development:** Designed the data model and integrated ML features.

Using Agile, we worked in short sprints, with regular stand-ups to track progress and identify blockers.

EXISTING SOLUTIONS

Existing solutions tend to:

- Focus on generic task management rather than tailoring features for students.
- Lack predictive insights, leaving students guessing about their workload.

This is where QuickSync shines by providing a student-first approach that combines analytics, simplicity, and relevance.

DATA MODEL

Our data model includes:

Student Profiles:

Tracks individual habits and performance.

Homework Tasks

Stores task details, deadlines, and estimated completion times.

Analytics Data

Captures progress metrics for performance insights.

CONCLUSION

QuickSync solves the critical problem of poor task management and time estimation faced by students. By offering tailored insights and a user-friendly design, it empowers students to achieve more with less stress. Though our journey is ongoing, QuickSync has laid a strong foundation to transform student productivity and improve academic experiences.

THANK YOU
